

Preconstruction Prohibition Waiver

Air Pollution Control Program fact sheet

5/2003

Preconstruction Prohibition Waiver Checklist

The requirement that a construction permit be issued before an air emission source begins construction may be waived under certain conditions. If a facility meets each requirement on the following checklist, a request may be made for a preconstruction prohibition waiver. If a preconstruction prohibition waiver is granted, construction on the facility may begin prior to the granting of the permit.

- The applicant acknowledges that the project requested is not or will not be "major" [will not be subject to section (7), (8) or (9) of 10 CSR 10-6.060, or Part C or D of the Federal Clean Air Act.]. Potential emissions (without voluntary, limiting conditions) in application must demonstrate non-major rates (de minimis for major-modification, major levels for construction);
- The applicant states that construction at the site has not begun;
- The applicant accepts all liability associated with possible denial of permit application;
- A proposed schedule of construction activities has been provided;
- A permit application has been submitted.

Questions

Copies of the rules for the Permit Program may be obtained for a \$25 fee through the Secretary of State's Office at (573) 751-4015. Please ask for Missouri State Rules Title 10, Division 10 (10 CSR 10).

Application forms are available by written request. The address is Missouri Department of Natural Resources, Air Pollution Control Program, Construction Permits, P.O. Box 176, Jefferson City, MO 65102-0176.

If you have any questions on construction permits, please call the Air Pollution Control Program at (573) 751-4817; or use the Department of Natural Resources' toll-free line, 1-800-361-4827. Ask for Air Construction Permit information. Hearing impaired persons may reach staff through Relay Missouri, 1-800-735-2966.
